## Peters Prattling

**Next month – Not sure yet, to be announced/decided at this meeting.**

### Last Months Competition

I'm sure Robin will comment further on last month's competition, but I for one would just like to say, wow! What a fantastic number of entries and to such a high standard too, the judging was very difficult. One possibly interesting statistic, we have already had more entries in the first 2 rounds of this year's competition than we had in the 3 rounds for last year. At this rate the Southend judges for the Modeller of the Year competition will have to arrive even earlier to have any hope of completing before about 11:00pm.

### Happy Birthday Phil!

Phil Worth is celebrating his 60<sup>th</sup> birthday sometime around now. He did tell me the exact day but in my old age I've forgotten what it was. Nevertheless many happy returns Phil.

## Spotted Plane

The Aichi Watch and Electric Machinery Company Limited (Aichi Tokei Denki Kabushiki Kaisha) created a number of aircraft for the Japanese Imperial Forces during the leadup to and throughout World War II. The most famous of these was probably the Aichi D3A2 "Val" bomber. The second-most famous was the Aichi E13A1 "Jake".

The Aichi E13A1 was designated by the Japanese Navy as Type Zero Reconnaissance Seaplane, Model 11. It was three seat reconnaissance aircraft, normally carried by aircraft tenders, cruisers and at least one battleship. It was also based on sea plane bases.

The plane was a low-wing monoplane, with all metal (aluminium) surfaces, except for the controls surfaces. It was 11.2 metres long and had a wing-span of 14.5 metres. It was powered by a single 1,080 hp Mitsubishi Kinsei 43 14-cylinder two row radial engine driving a three bladed propeller. This gave a maximum speed of 376 km/h at 2,180 metres and a cruising speed of 222 km/h at 2,000 metres. It had a range of 2,090 kilometres. Empty it weighed 2,642 kg, loaded 3,640 kg and with a maximum take-off weight of 4,000 kg.

The plane had two large floats attached to the fuselage by struts.

Armament was one flexible rear-firing 7.7 mm Type 92 machine-gun. It could also carry one 250 kg bomb or four 60 kg bombs or depth-charges. The plane, like all Japanese military aircraft, was given a nickname by the Allies. These names were all male or female Christian names, given to help simplify communications. The Aichi E13A1 was called "Jake".

In the Papua New Guinea province of New Ireland, the capital of Kavieng had a sea plane base. This was located just to the south of the now town centre, opposite the southern end of Nusalik Island (where Nusa Resort is located). There are at least three Jakes located near Kavieng. One of these, called Jake Number 1, is located 930 metres south of Nusa Resort, off the southern end of the reef that runs from the south-western end of the island. It is a two minute run from the resort to the location, although this plane is normally only done as a third dive using residual air from one of your tanks used earlier in the day.

As mentioned, the plane is located right off the southern end of the reef at GPS S2° 35' 27.1" E150° 46' 51.9" using WGS84 as a datum. The plane is visible from the surface as it is in only 12 metres.

A closeup of the engine and prop

The plane faces north-east right on the edge of the reef. The prop is marginally shallower than the rest of the plane. The two floats are located on the top of the reef in about 1.5 to 2 metres of water. One of the floats is smashed up as if it hit something. The Pacific Wrecks Web Site claims that this plane probably sank at its mooring.
